Abstract

Identity of the working group in the psychotherapeutic integrated treatment of spectrum borderline patients : a contribution of action-research.

The following contribution is intended to emphasize the role of the GP team (workgroup) in the context of Public Service Community, concerning the care of one of the most complex and difficult issue, especially in the last years, of several health's clinical agencies; in particular, it outlines how the consolidation of the various aspects of care (psychotherapy, psychopharmacology, psychosocial, psychoeducational) in a team that has common optical as well as different models of the mind, is a great value therapeutics resource. If well managed and supervised, it's able to rearrange the splits typical of this pathology. The contribution discusses on the empirical model through an initiative leaded by ASL 9 of Grosseto, for over 10 years, through a systematic supervision of clinical interventions of several actors with different skills, aiming to closely monitor the level of the interventions as well as their complexity and evaluate the results in progress.
